

Dredge Monitor

The Dredge Monitor is a compact and flexible system based on the powerful Viking Software.

With the capability of interfacing both analogue and digital signals, it is possible to visualise a production meter and/or the suction tube position.

The user interface can easily be configured to display custom and calculated values in numbers, graphs and bars.

Trusting on the powerful I/O of Viking logging and relaying of data over the internet or a local network is also possible.

- Configurable analogue and digital input options
- Can accept 4-20mA, 0-10V, RS232/422/485, CANOpen, TCP & UDP
- Highly customisable user interface
- Panel mount or stand alone LCD
- Part of the Viking Software and fully software upgradable
